The Endpoint Catalogue (EPC) contains the endpoint details for each BaRS enabled service. When a request is made to the BaRS FHIR Api (BaRS Proxy) it uses the endpoint catalogue to find the current endpoint and send the message.

Endpoint Catalogue changes are needed when:

- a service adopt BaRS and is ready to receive messages
- a provider changes their supplier system (or potentially has other infrastructure changes)
- a BaRS enabled service is deactivated (retires/closes)

We check daily (Monday-Friday) to see if any endpoint changes are needed because:

- there is continuous implementation of BaRS Application 5 in the pharmacy sector
- pharmacies switch their system suppliers

Once a week we complete a full comparison check of the Endpoint Catalogue with Directory of Services data to ensure the data remains synchronised.

1 Pre-requisites

You need:

- access to the EPC tool (see below)
- access to MASTER - CPCS IT Supplier Submissions Log.xlsx' (<https://nhs.sharepoint.com/sites/IntegratedUrgentCare/Shared%20Documents/Forms/AllItems.aspx?id=%2Fsites%2FIntegratedUrgentCare%2FShared%20Documents%2FDirectory%20of%20Services%20%28DoS%29%2FPharmacy%2FNHS%20CPCS%20Supplier%20Changes>)
- access to a team member who is enabled as an approver for the BaRS targets repository (NHS Digital / booking-and-referral-targets) in GitHub

2 What is the EPC Tool?

The EPC Tool is used to manage Organisations, Healthcare Services and Endpoints for BaRS endpoints stored in the Endpoint Catalogue. It is a standalone tool to facilitate and simplify the daily management of endpoint switches created by the Pharmacy First programme, along with all other BaRS endpoints. It can be interrogated through searching, under navigation options 'Supplier Endpoint' and 'Service Provider Endpoint', supports the Pharmacy First endpoint switching process (including creating the targets.json file required for committing to GitHub) and has a full audit of activity.

NB: The EPC Tool is not directly linked the Endpoint Catalogue but is purely a tool to assist with its management. The Endpoint Catalogue sits independently in the GitHub Repo - <https://github.com/NHSDigital/booking-and-referral-targets>. However, it is imperative the EPC Tool is used as the source of all updates. Update must not be made directly into the GitHub Repo without reference to the EPC Tool because the two will be out of synchronisation and risks endpoints being deleted.

3 Releases

Live version¹ (<https://vmnfkm94pj.eu-west-2.awsapprunner.com/>)

Test version² (<https://73rtp3rac6.eu-west-2.awsapprunner.com/>³)

1. <https://vmnfkm94pj.eu-west-2.awsapprunner.com/>

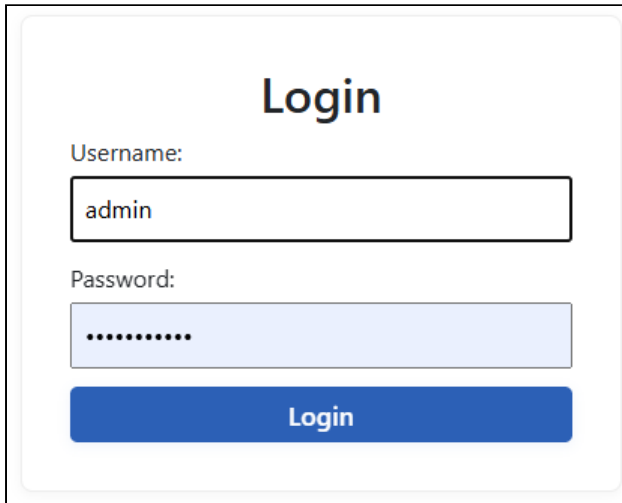

2. <https://73rtp3rac6.eu-west-2.awsapprunner.com>

3. <https://73rtp3rac6.eu-west-2.awsapprunner.com/login>

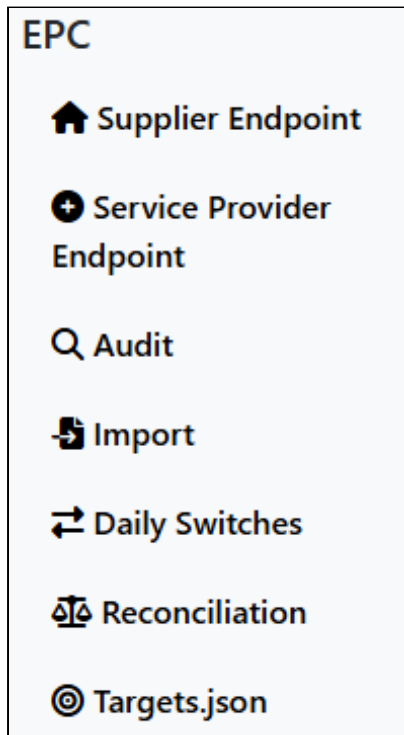

4 Pharmacy First EPC Updates

4.1 Login and Navigation

- Launch <https://vmnfkm94pj.eu-west-2.awsapprunner.com/>
- Login with Username - admin, Password - BarsAdmin55

A screenshot of a web application's login page. The page has a light gray background. At the top center, the word "Login" is displayed in a large, bold, black font. Below this, the text "Username:" is followed by a white input box with a black border containing the text "admin". Below the username box, the text "Password:" is followed by a light blue input box with a black border containing ten black dots. At the bottom of the form, there is a solid blue rectangular button with the word "Login" in white text.

Navigation options appear on the left hand side

The bottom three options in this list are key to performing the Pharmacy First updates to the EPC

4.2 Daily Switches

Steps to perform Pharmacy First Endpoint Catalogue Daily Updates -

- Navigate to the 'MASTER - CPCS IT Supplier Submissions Log.xlsx' (<https://nhs.sharepoint.com/sites/IntegratedUrgentCare/Shared%20Documents/Forms/AllItems.aspx?id=%2Fsites%2FIntegratedUrgentCare%2FShared%20Documents%2FDirectory%20of%20Services%20%28DoS%29%2FPharmacy%2FNHS%20CPCS%20Supplier%20Changes>)
- Set the 'Completed Switch Date' column to today's date
- Copy all populated rows, including the header row
- On the EPC Tool, select 'Daily Switches'
- Paste the copied excel cells into the text box

Daily switches

Paste data from 'MASTER - CPCS IT Supplier Submission Log' sheet with headers:

Switches must not be completed after 16:00."

Location	New Supplier	Date Added	Region	ICB	ICB-Sub
Shirley Pharmacy	FQ024	SO15 3HH	04/08/2025	Cegedim	2000110739 2000110741
2000110742	2000110743	04/08/2025	20/06/2023	Delayed switch date	04/08/2025 NHS
South East Region	NHS Hampshire and the Isle of Wight ICB	NHS HIOW ICB - Sub Region - HIOW - D9YOV	Cegedim	07/07/2025	
Middleton pharmacy	FKV30	DL2 1BN	31/07/2025	Positive Solutions	2000017815
2000041040	2000053073	2000017778	04/08/2025	04/08/2025	NHS North East
and Yorkshire Region	NHS North East and North Cumbria ICB	NHS Tees Valley Place - 16C			
Positive Solutions		21/07/2025			

Preview Note: only 20 rows shown and processed.

Pharmacy Name	ODS Code	Pharm + DoS Service ID	New Supplier	Current Supplier	Status
Shirley Pharmacy	FQ024	2000110743	Cegedim	Pharmoutcomes	Switch from: Pharmoutcomes
Middleton pharmacy	FKV30	2000017778	Positive Solutions	Pharmoutcomes	Switch from: Pharmoutcomes

Perform changes

- Review 'status' column to ensure processing align once complete
- Click 'Perform changes' button
- The green text indicates the processing performed

Perform changes

Success: Added 0 Orgs, Added 0 Hcss, Added 0 endpoints, Added 0 records, Switched 2 Endpoints.

- Click 'Targets.json' from the navigation menu on the left handside
- Copy the .json rendered
- Create a new branch in GitHub Repo - <https://github.com/NHSDigital/booking-and-referral-targets>
- Apply the copied .json to the file 'booking-and-referral-targets/targets/prod/targets.json'
- Commit the change
- Create a Pull Request for review
- Send a message to the EPC Changes Teams chat to share that changes have been made and how many are switches/new. Provide the URL for the Pull Request.
- Follow the process to accept and test the change to the EPC
- Add today's date into the "BaRS EPC Update" column of the MASTER - CPCS IT Supplier Submissions Log for each updated service. MASTER - CPCS IT Supplier Submissions Log.xlsx' (<https://nhs.sharepoint.com/sites/IntegratedUrgentCare/Shared%20Documents/Forms/AllItems.aspx?id=%2Fsites%2FIntegratedUrgentCare%2FShared%20Documents%2FDirectory%20of%20Service%20%28DoS%29%2FPharmacy%2FNHS%20CPCS%20Supplier%20Changes>)

4.3 Weekly maintenance

Steps to perform Pharmacy First Endpoint Catalogue Weekly Updates. This is currently carried out after the Thursday evening daily reconciliation process.

- Once logged into the EPC Tool, select 'Reconciliation' from the left hand side panel

Reconciliation

> 1. Create report, for DOS team

> 2. Process DOS report

> (optional). Retired and closed

- Expand '1. Create report for DOS team'
- Click 'Create'

1. Create report, for DOS team

Download CSV

- Once complete, click 'Download CSV'
- Email the downloaded file to england.dos@nhs.net⁴, england.dosmduec@nhs.net⁵ and the local BaRS team responsible for performing the daily updates

The remainder of this process will happen on a Friday when the DOS team send the reconciliation spreadsheet back. This process on a Friday will take place **as well** as the normal daily reconciliation process on a Friday.

4. <mailto:england.dos@nhs.net>

5. <mailto:england.dosmduec@nhs.net>

- The file will be reviewed and any discrepancies emailed back in an excel spreadsheet, copy all rows (including the header) from the spreadsheet
- Navigate to '2. Process DOS report'
- Paste the copied data in to the available field "Paste DOS report with headers:"
- The table below will detail the changes required

▼ 2. Process DOS report

Paste DOS report with headers:

pharmoutcomes.oneoneone.nhs.uk:1880/itk/incoming/SendNHS111Report-v2-0\urn:nhs-itk:interaction:primaryOutofHourRecipientNHS111CDADocument-v2-0.\(CDA)\Primary\| Local team error, retired by mistake and resubmitted when error noticed, to add to BaRS (Service ID: 200056246)

FTD10 Pharm+: Avicenna, Rownhams Road, Maybush, Southampton 2000040536 https://bars-prod-ygm06-pharmoutcomes.emis.thirdparty.nhs.uk #N/A Remove from BaRS - Retired

FDC78 Pharm+: Bourne End Pharmacy The Parade, Bourne End 2000112935 https://bars-prod-ygm06-pharmoutcomes.emis.thirdparty.nhs.uk #N/A Remove from BaRS - Retired

Process

- Click 'Process' to make the changes
- The table updates to indicate what changes have occurred during processing
- Follow the above 'Daily Switches' section at the designated point in the working day NB: the targets.json file created will include the Weekly changes undertaken in the steps above, in addition the usual Daily changes.
- NB: On the day when you are completing the Weekly changes, the Daily changes can either be undertaken from the fourth text box on the 'Reconciliation' page or else by navigating to 'Daily Switches' on the left hand side menu.

Endpoint Catalogue Approver

Any changes to the Endpoint Catalogue require an approver to review the changes made (in GitHub). If the changes are correct, the approver will merge the pull request into the NHSDigital/booking-and-referral-targets production repository and confirm that the proxy api remains functional.

To approve the changes:

- Collate the data sources for the changes (Master CPCS spreadsheet - filtered to today, DOS reconciliation spreadsheet for weekly changes, potentially additional emails where there are anomalies).
- In GitHub, Navigate to NHSDigital/booking-and-referral-targets and access the relevant pull request
- In the Pull Request, navigate to Files changed to see the detail of the changes that have been made
- Cross reference the number of changes in the pull request with the number of expected changes, total, new and switches, for the date in Master CPCS spreadsheet (and any other data sources for that day)
- If the number of changes in the PR does not match the number of expected changes, comment on the PR and liaise with the person making the changes to identify the problem so that it can be resolved.
- If the number of changes in the PR matches the number of expected changes, spot check individual changes by reviewing the Pharm+ DoS ServiceId value (Master CPCS spreadsheet column I) and New Supplier (Master CPCS spreadsheet column Q) with the correlating ServiceId in the Pull Request to confirm the service has been attributed to the correct endpoint.
- If the changes are correct, Approve the Pull Request
- Merge the Pull Request into Production
- Test that the BaRS Proxy FHIR API remains functional either by using Postman, or Splunk, to demonstrate that 200 success responses are being generated.

4.4 Handling EPC errors and anomalies

Missing/incorrect data for a record to be processed from MASTER - CPCS IT Supplier Submissions Log

- If you identify this before attempting to do the daily switches,
 - exclude the record from processing
 - email england.dos@nhs.net⁶ with the details of the record and the missing/incorrect data so that it can be resolved
 - don't add a date to the BaRS EPC Updated column for this record
- If this is identified in the EPC Tool when you process the changes
 - an error will display to show that the record has not been processed
 - email england.dos@nhs.net⁷ with the details of the record and the missing/incorrect data so that it can be resolved
 - don't add a date to the BaRS EPC Updated column for this record

The EPC tool returns an error when you process changes

6. <mailto:england.dos@nhs.net>

7. <mailto:england.dos@nhs.net>

- Review the error which may relate to a single record or all of the records being processed
- Identify the cause of the error
 - If the error relates to missing/incorrect data follow the instructions above for missing/incorrect data
 - If the error relates to the structure of the data you pasted
 - Remove the data from the Daily Switches field in the EPC tool
 - Re-copy the daily switch data and header row from the MASTER - CPCS IT Supplier Submissions Log
 - Paste the data into the Daily Switches field in the EPC tool
 - Process the changes
 - If an error occurs again, seek support from BaRS Team members
 - If the error relates to a record but all data is present and correct
 - Use Supplier Endpoint/Service Provider Endpoint/Audit to investigate the details of the endpoint
 - Seek support from BaRS Team members
 - It may be necessary to contact england.dos@nhs.net⁸ to confirm history and actions

Additional changes to the daily switches

Anomalies in the DOS process may occur. When this happens, individual records can be out of sync with the standard process that needs to be updated. Endpoints for services other than pharmacy are updated less frequent and will occasionally need adding and will come to the BaRS team through a different data flow.

When you need to make a change outside of the daily switches process:

- Pharmacy endpoints:
 - Isolate the additional endpoint data to be updated. In the MASTER - CPCS IT Supplier Submissions Log you can filter for the date the change was made or search using ODS parameter etc.
 - Copy the header row and the data for the record to be updated
 - Process in the same way as the daily switches. The daily switch process can be performed multiple times in the same day.
- Endpoints for any another other type of service :
 - Identify how many endpoints you need to update.
 - For single/small number it will be easier to update them manually using either the Service Provider Endpoint or Supplier Endpoint function in the EPC tool. When you have completed the update(s), proceed to Targets.json in the EPC tool and follow the process for completing daily switches.
 - For a larger volume, copy the header rows from MASTER - CPCS IT Supplier Submissions Log into excel/notepad/other tool and use them to structure the data for the endpoint changes. Copy and paste the data with the header rows and process as

8. <mailto:england.dos@nhs.net>

the daily switches. The daily switch process can be performed multiple times in the same day.

An unexpected error occurs with the EPC tool

- If you encounter any other type of error, seek support from BaRS team members
